Hi Maurizio, There is an oil stain that has seeped into my tropic brown countertop, leaving it darker than the rest of the counter. I've read about making a poultice out of water and baking soda. Is this worth a shot?

Dear Jen:

â€œIs this worth a shot? â€•

Not in my book it ain't. How can you possibly clean oil with water??... You need a chemical to be poulticed that will dissolve the oil. And, BTW, baking soda is not a good poulticing material.

So, what to do?

When it comes to stain removal, either you buy one of those expensive â€œProfessional kitsâ€• (that true professionals seldom use!) at a stone retailer near you, or you can spend less money and get our comprehensive guidelines on how to remove stains by using inexpensive and far more effective means that you may already have in your household! Such impressive piece of literature will also tell you how to tell stains apart from â€œstainsâ€•, and what to do about the latter! It does carry a small price tag, and you can order it by logging on at: <http://www.mbstone.com/literature/literature.htm>. It's available in pay-per-download format and it's much cheaper than any kit on the market! Not to mention the little and much needed support you'd be giving to the cause â€œ **your cause** - since every single penny of the cost of the article will be used to support it.

Also, will you please read and e-sign our Statement of Purpose by logging on at: <http://www.marblecleaning.org/purpose.htm>? By spreading the word about this valuable site among your friend & family and the stone trades' people you've been dealing with, you will be rendering everybody a valuable service!

Ciao and good luck,

Maurizio Bertoli
