

Granite scratch repair made big blotch

Dear Maurizio: I just had a new granite countertop installed & noticed a fairly large scratch. The fabricator polished it to try to remove the scratch & now there is a 6" diameter blotch where the finish is different from the polishing. What can I do to make this less noticeable? Would an application of your stone polish in this area help bring up the shine to match the rest? Thanks so much! Lyndee

Dear Lyndee:

It looks like "Michelangelo" struck again!

"Would an application of your stone polish in this area help bring up the shine to match the rest?"

Not one bit.

"What can I do to make this less noticeable?"

Hire a true stone professional instead of your fabricator and then charge your fabricator for the cost you will incur to have your countertop polished the way it should.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm>?

Ciao and good luck,

Maurizio Bertoli
