---

Hello, I have new Verde Butterfly counertops, and several hard water spots aournd the faucet and next to the sink. I would like to know how to remove them. The water softner has been fixed so once they are gone, they will not return. Thank you, Dawn

Dear Dawn:

This is an easy one: scrape the worst with a brand new raz or blade, and then finish the job with a good-quality soap film and mineral deposit remover rated "for stone", like MB-3.

Ciao and good luck,

Maurizio Bertoli
