Q. I would like to remove the light grout haze remaining on a honed travertine floor installed 3 weeks ago. The installer tried using grout release, but stopped immediately when this seemed to etch the stone. Can you recommend another product or technique? Thank you.

A. You would need MB Stone Care MB-2. It will effectively remove grout haze from the stone. Using a medium bristle brush or a soft scourer, spray the MB2 and gently scrub the surface and rinse with clean water.

Regards
