Q.I have the "White Carrerra" marble floor tiles with dirty black grout between tiles. What can I use to clean the grout? Thank you.

A.Hello Joe- Is your grout sanded or unsanded? Carrara polished or honed?

We do lots of white carrara floors which are honed or polished with black grout lines and abraded worn stone surfaces. We can make them look in most cases

brand new. As a home owner while it would be a major undertaking to restore your entire floor you could with the help of our mb-2 heavy duty grout and stone cleaner get the grout clean again. You will need some grout brushes and a wet vac. You can apply the mb-2 as per the instructions on the bottle. Agitate the chemical as you apply it on the floor by scrubbing the grout lines. Then let that chemical dwell on the surface without drying out for 10 -15 minutes (keep it wet using a spray bottle filled with water). Use a wet vac to capture the soils then rinse and repeat. If the grout is too far gone then it will have to be replaced. Definitely a job for a pro! If you really want your floor to look good find a professional stone refinisher and make your floor look like new.
