---

Q.I tiled my shower with tumbled stone tile and sealed it. However, soap scum is hard to remove, even though I wipe it dry at every use. What can I use to remove the soap scum without destroying the color?

A.Hi You will need to remove the film with a razor blade held at the right angle. Also you will need plenty of blades.

If you can get the film off you can maintain it with mb-3.

It works great. However I suggest you call a bona fide stone restorer who will handle it for you.
