

Acid stain (rust remover) on black marble floor tile

Authored by: **Maurizio Bertoli** [mailto:mail@mbstone.com]

Saved From: <https://marblecleaning.org/knowledgebase/article.php?id=190>

What is the best products and procedure to remove the etching (a cloudy circle) on a (12 inch x 12 inch) polished black marble floor tiles caused by oxalic acid rust remover.

Dear Harold:

If the etching is not too severe (dark to medium gray and smooth) you could try with a product like MB-11 (<http://www.mbstonecare.com>). But if it is too severe (light-gray and almost whitish and a little rough), then you will need the services of a stone restoration contractor who will have to slightly grind (hone) your damage before polishing.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm> ? :-)

Ciao and good luck,

Maurizio Bertoli
