---

I have just installed a new granite counter top (DIY) and used a Sharpie to mark my cut lines. Now I can't remove the marks that remain at the edge of the cut. What can I do to remove these marks.

Dear William:

Let's start by saying that it ain't gonna be easy!... :-(

This is not just in consideration of the staining agent that's so difficult to remove, but even more importantly, of the position and shape of the stain.

At any rate we can't help that, can we?... So, I reckon that you're gonna have to manage! :-)

When it comes to stain removal, either you buy one of those expensive "Professional kits" (that no true professional ever uses!) at a stone retailer near you, or you can spend less money and get our comprehensive guidelines on how to remove stains by using inexpensive and far more effective means that you may already have in your household! Such impressive piece of literature will also tell you how to tell stains apart from "stains", and what to do about the latter! It does carry a small price tag, and you can order it by logging on at: <http://www.marblecleaning.org/literature.htm>. It's available in pay-per-download format and it's much cheaper than any kit on the market! Not to mention the little and much needed support you'd be giving to the cause "your cause" - since every single penny of the cost of the article will be used to support it.

Also, will you please read and e-sign our Statement of Purpose by logging on at: <http://www.marblecleaning.org/purpose.htm>? By spreading the word about this valuable site among your friend & family and the stone trades' people you've been dealing with, you will be rendering everybody a valuable service!

Ciao and good luck,

Mauri zio Bertoli
