

Damaged Granite Top

Authored by: **Maurizio Bertoli** [mailto:mbstone.com]

I just damaged my bathroom vanity top. It is green granite (a stock item from one of the home improvement chains). I accidentally set a bottle of toilet bowl cleaner on it for a few minutes and there must have been some of the cleaner on the bottom of the bottle. When the bottle was removed the granite was visible bleached out where there was contact. Washing the affected area was did not help. The active ingredient in the toilet cleaner was hydrogen chloride. Is there anything that I can do to repair or at least minimize the lighter colored areas? Thanks in advance!

Dear Jon:

" Is there anything that I can do to repair or at least minimize the lighter colored areas?"

No. Your only option is to hire a proficient stone restoration contractor who will slightly re-grind (hone) the surface of the stone where the damage occurred, and then re-polish to blend-in with the rest of the surface.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm>
