What is the best way to restore an interior slate floor that has been urethane coated ?

Dear C.:

The urethane coating must be removed and then, either you apply a new layer of the stuff, or you go into a different (and better, IMHO) maintenance program, by applying a good quality stone color enhancer like MB-6.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm> ? J

Ciao and good luck,

Maurizio Bertoli
