

travertine floor

Authored by: **Maurizio Bertoli** [mailto:mail@mbstone.com]

Saved From: <https://marblecleaning.org/knowledgebase/article.php?id=465>

I had a pest control substance sprayed directly on my travertine floor. It turned to a sticky goo that will not come up, when I try to wipe it up with water it becomes crystallized. What can i use to clean my floor? I don't know what kind of sealant was put on it.

Dear Jean:

" I don't know what kind of sealant was put on it."

Why, are you aware of any sealer that was put **on** your travertine floor??... And if so, what on earth for?...

That said, it appears that whatever stuff was sprayed on your floor is beyond the cleaning knowledge of most folks, including myself, if the water turns the sticky stuff into crystals.

What I would do is go back the your experminator and ask for advice.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm>
