---

I had a pest control substance sprayed directly on my travertine floor. It turned to a sticky goo that will not come up, when I try to wipe it up with water it becomes crystallized. What can i use to clean my floor? I don't know what kind of sealant was put on it.

Dear Jean:

Why, are you aware of any sealer that was put **on** your travertine floor? And if so, what on earth for??...

That said, your problem goes beyond the know-how of most cleaning people, if the sticky stuff turns into crystals when hit by water.

If it were my floor, I would call the exterminator and ask them for advice before trying anything else.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm> ? J

Ciao and good luck,

Maurizio Bertoli
