My marble backsplash, newly installed, feels like glass but looks dull in places. Will one of your products polish it to a higher shine? (I have an orbital sander) Thanks!

Dear Steven:

Without knowing what kind of marble you have I can't answer your question.

If nothing happened to your stone, it could just be the "œnature of the beast" (certain marbles do have so-called "œdead spots" throughout their texture that will not polish as the rest).

If instead some "œaccident" happened that caused the dull spots (acid etching), then a good-quality Marble Repair Kit could do the trick for you.

Unfortunately, without the information about the type of marble you have I can't give you a more precise answer.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm>?

Ciao and good luck,

Maurizio Bertoli
