

MB-3 Hard Minerals from water?

Authored by: **Maurizio Bertoli** [mailto:mbstone.com]

Saved From: <https://marblecleaning.org/knowledgebase/article.php?id=844>

I have yellowed marble from hard water. What is MB-3 you talk about to take it off. Title shops I have talked to do not know what it is. Thank You, Keith

Dear Keith:

In the stone business there's only one instance "and one instance only" when the perceived problem corresponds exactly to the actual problem: when a piece of stone is broken "End of the list.

In all other instances, the perceived problem *could* be the actual problem, but then again, it could not be.

If your stone turned yellow it only means one thing and one thing only: your stone contains iron minerals within and you have water behind and/or under your tiles that's migrating through its core.

That has nothing to do with hard mineral deposit from the water, and therefore MB-3 wouldn't do the first thing about.

Nothing will, as a matter of fact: your stone is rusted through and through.

May I ask you now to please read and e-sign our Statement of Purpose at: <http://www.marblecleaning.org/purpose.htm>
